

## RMPP Weekly Reflections

### Unit 2 Reflection

The learning during Unit 2 supported planning to consider a suitable research topic, methodology for research and literature review skills. The continuation of the discussion forum provided helpful information from two of my peers suggesting the risks posed by machine learning (Wang, 2023).

Furthermore, artificial intelligence tools have been shown to potentially show bias to discrimination (Gussoni, 2023). These insights were helpful; however, overall participation in the forum was limited to a few peers, which meant that sharing perspectives and ideas were not as beneficial as good have been.
