SSA Unit 3 Feedback Design Document

Tutor feedback:

A good list of vulnerabilities - however, more references could be provided e.g. for encryption algorithms (such as WPA, etc). Overall good effort

You provided a good selection of diagrams with accompanying vulnerabilities. You made a good attempt to discuss the technical aspects, although some further elaboration could add value.

You provided a very good, comprehensive list of mitigations - I especially liked your discussion of the limitations.

Overall, a good selection of references - although some older, less relevant ones were included. A generally good layout (and use of diagrams) - however a couple of typos . Nonetheless, a very good report.
